

Deer Chow and Elk Chow

Purina Mills Deer & Elk Chow

Most deer and elk prefer protein and energy-rich foods such as browse, leafy plants and acorns, over more fibrous grasses. Mother Nature typically provides nutrients through this natural forage to SUSTAIN a deer or elk population. But rather than merely sustaining deer and elk, most people are interested in growing them to their maximum genetic potential. Supplemental feeding can be the difference between an average deer or elk and the world's biggest deer. Plus supplemental feeding also helps deer and elk live better, healthier lives.

For more detailed product and nutritional information please visit our Wildlife website at <http://wildlife.purinamills.com>.

	<p>Patented Proteins</p> <p>AntlerMax® is a patented, all-natural nutritional technology developed by Purina that provides higher quality proteins to growing deer and elk antlers. The unique digestive tract of deer and elk reduces the quality of most proteins by breaking them down too quickly and diluting their value for antler growth. AntlerMax Technology naturally protects high-quality proteins from early breakdown and delivers a higher concentration to growing antlers. The result – large trophy antlers in bucks at an earlier age, abundant milk production in does and optimum growth and development in fawns.</p>
	<p>WaterShield™ Technology Protection</p> <p>Exclusive WaterShield™ Technology is a unique water-resistant process that enables the Deer and Elk Chow pellets to repel moisture. This helps to significantly reduce pellet waste and labor commonly associated with rain, humidity and damp feeding conditions. It is safe, doesn't affect palatability, and ensures high consumption of AntlerMax Technology. In addition, WaterShield Technology enhances the flowability of Deer and Elk Chow pellets through gravity and broadcast feeders. This helps reduce the chance of deer and elk going without feed because of a clogged feeder. Feeding Deer Chow with WaterShield can help save you money during wet conditions because of reduced pellet waste and less labor scooping out wet mushy feed.</p>
	<p>Purina Mills® AntlerMax® Energy Technology</p> <p>What it is...A highly- researched patented energy technology that enhances the body condition of deer and elk so they can reach their genetic potential for body size, health and maximum antler growth.</p>
